WOOHYUN SONG

g1fted13@snu.ac.kr
Department of Computer Science and Engineering, Seoul National University

EDUCATION

Seoul National University Mar. 2022 – Present
B.S. in Computer Science and Engineering

RESEARCH INTERESTS

Using machine learning on tabular and time series data to support decision-making, in areas such as sports and finance.

PROJECTS

KBO Game Outcome Prediction Mar. 2026 – Sep. 2026
STATIZ KBO AI Prediction Competition, team of 3

- Designed game-level features from baseball statistics based on prior studies (e.g., FIP, Pythagorean win percentage, bullpen fatigue), and proposed a random forest + logistic regression ensemble.
- Made a dashboard that let all teammates check input features and predictions from anywhere; used it to find and fix edge-case errors in the first model.
- Selected as an outstanding submission in the Hidden Extra Challenge of Computer Programming (SNU, Spring 2026), an extra-credit assignment on solving real-world problems with LLMs.

WorldQuant International Quant Championship (IQC) 2026 2026
Team of 2

- Researched alpha signals on the WorldQuant BRAIN platform, mostly based on company fundamental data.
- Advanced to Stage 2; ranked in the global top 20%.

Intentional Walk Analysis in Baseball Spring 2023

- Course project (Scientific and Technical Writing): analyzed hand-collected game data with logistic regression and SVM.

RELEVANT COURSEWORK

Introduction to Machine Learning, Linear Algebra, Econometrics, Computer Programming

SKILLS

Programming: C++, Python
Certification: SQL Developer (SQLD)
Languages: Korean (native), English (TOEIC 955, OPIc IH)

MILITARY SERVICE

Republic of Korea Air Force Feb. 2024 – Nov. 2025
Tactical Communications Operator

- As a member of the soldiers' autonomy committee, planned and ran a peer talent-sharing mentoring program on base.
- Taught introductory algorithms (graph theory, dynamic programming, backtracking, binary search) to fellow soldiers using practice problems.
